COMPLIANCE

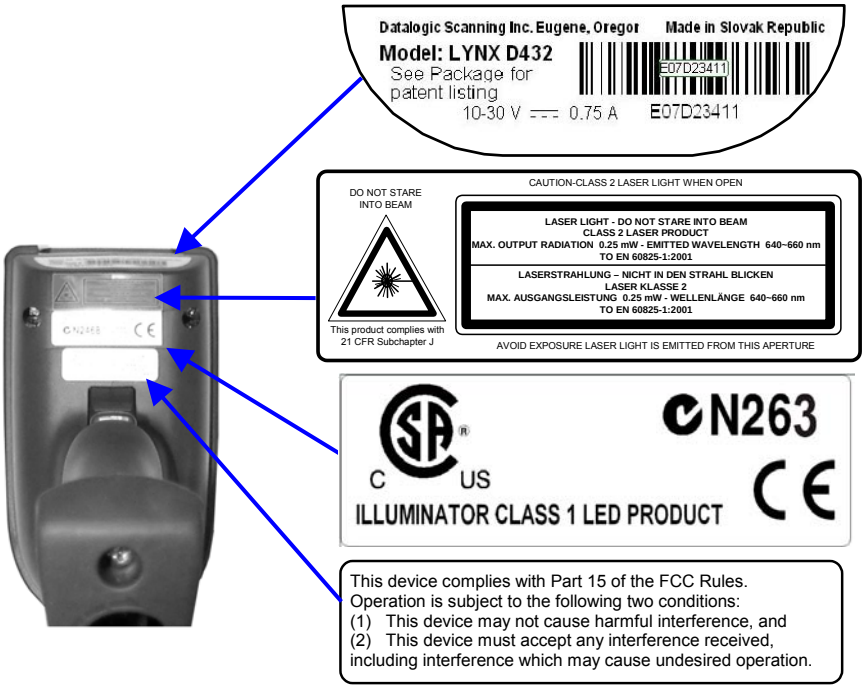

Figure B - LYNX™ D Reader Product Labels

FCC COMPLIANCE

Modifications or changes to this equipment without the expressed written approval of Datalogic could void the authority to use this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference which may cause undesired operation.

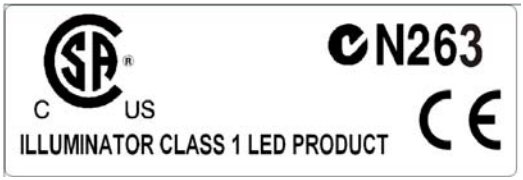
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

LASER SAFETY

The Lynx™ D hand-held reader is a Class 1 LED product regarding its Illuminator and a Class 2 laser product regarding its Aiming System.

LED Illuminator

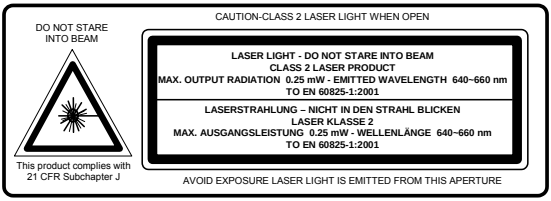
The use of an illuminator in the Lynx™ D hand-held reader is a Class 1 LED product:



ILLUMINATORE LED CLASSE 1
AUSLEUCHTER LED KLASSE 1
ILLUMINATEUR A LED DE CLASSE 1
ILUMINADOR LED DE CLASE 1

Aiming System

The Lynx™ D aiming system meets the requirements for laser safety.



I	D	F	E

ENGLISH

The following information is provided to comply with the rules imposed by international authorities and refers to the correct use of your terminal.

STANDARD LASER SAFETY REGULATIONS

This product conforms to the applicable requirements of both CDRH 21 CFR 1040 and EN 60825-1 at the date of manufacture.

For installation, use and maintenance, it is not necessary to open the device.

WARNING

Use of controls or adjustments or performance of procedures other than those specified herein may result in exposure to hazardous visible laser light.

The product utilizes a low-power laser diode. Although staring directly at the laser beam momentarily causes no known biological damage, avoid staring at the beam as one would with any very strong light source, such as the sun. Avoid that the laser beam hits the eye of an observer, even through reflective surfaces such as mirrors, etc.

ITALIANO

Le seguenti informazioni vengono fornite dietro direttive delle autorità internazionali e si riferiscono all'uso corretto del terminale.

NORMATIVE STANDARD PER LA SICUREZZA LASER

Questo prodotto risulta conforme alle normative vigenti sulla sicurezza laser alla data di produzione: CDRH 21 CFR 1040 e EN 60825-1.
Non si rende mai necessario aprire l'appa-recchio per motivi di installazione, utilizzo o manutenzione.

ATTENZIONE

L'utilizzo di procedure o regolazioni differenti da quelle descritte nella documentazione può provocare un'esposizione pericolosa a luce laser visibile.

Il prodotto utilizza un diodo laser a bassa potenza. Sebbene non siano noti danni riportati dall'occhio umano in seguito ad una esposizione di breve durata, evitare di fissare il raggio laser così come si eviterebbe qualsiasi altra sorgente di luminosità intensa, ad esempio il sole. Evitare inoltre di dirigere il raggio laser negli occhi di un osservatore, anche attraverso superfici riflettenti come gli specchi.

DEUTSCH

Die folgenden Informationen stimmen mit den Sicherheitshinweisen überein, die von internationalen Behörden auferlegt wurden, und sie beziehen sich auf den korrekten Gebrauch vom Terminal.

NORM FÜR DIE LASERSICHERHEIT

Dies Produkt entspricht am Tag der Herstellung den gültigen EN 60825-1 und CDRH 21 CFR 1040 Normen für die Lasersicherheit.
Es ist nicht notwendig, das Gerät wegen Betrieb oder Installations-, und Wartungs-arbeiten zu öffnen.

ACHTUNG

Jegliche Änderungen am Gerät sowie Vorgehensweisen, die nicht in dieser Betriebsanleitung beschreiben werden, können ein gefährliches Laserlicht verursachen.

Der Produkt benutzt eine Laserdiode. Obwohl zur Zeit keine Augenschäden von kurzen Einstrahlungen bekannt sind, sollten Sie es vermeiden für längere Zeit in den

Laserstrahl zu schauen, genauso wenig wie in starke Lichtquellen (z.B. die Sonne). Vermeiden Sie es, den Laserstrahl weder gegen die Augen eines Beobachters, noch gegen reflektierende Oberflächen zu richten.

FRANÇAIS

Les informations suivantes sont fournies selon les règles fixées par les autorités internationales et se réfèrent à une correcte utilisation du terminal.

NORMES DE SECURITE LASER

Ce produit est conforme aux normes de sécurité laser en vigueur à sa date de fabrication: CDRH 21 CFR 1040 et EN 60825-1.
Il n'est pas nécessaire d'ouvrir l'appareil pour l'installation, l'utilisation ou l'entretien.

ATTENTION

L'utilisation de procédures ou réglages différents de ceux donnés ici peut entraîner une dangereuse exposition à lumière laser visible.

Le produit utilise une diode laser. Aucun dommage aux yeux humains n'a été constaté à la suite d'une exposition au rayon laser. Eviter de regarder fixement le rayon, comme toute autre source lumineuse intense telle que le soleil. Eviter aussi de diriger le rayon vers les yeux d'un observateur, même à travers des surfaces réfléchissantes (miroirs, par exemple).

ESPAÑOL

Las informaciones siguientes son presentadas en conformidad con las disposiciones de las autoridades internacionales y se refieren al uso correcto del terminal.

NORMATIVAS ESTÁNDAR PARA LA SEGURIDAD LÁSER

Este aparato resulta conforme a las normativas vigentes de seguridad láser a la fecha de producción: CDRH 21 CFR 1040 y EN 60825-1.
No es necesario abrir el aparato para la instalación, la utilización o la manutención.

ATENCIÓN

La utilización de procedimientos o regulaciones diferentes de aquellas describidas en la documentación puede causar una exposición peligrosa a la luz láser visible.

El aparato utiliza un diodo láser a baja potencia. No son notorios daños a los ojos humanos a consecuencia de una exposición de corta duración. Eviten de mirar fijo el rayo láser así como evitarían cualquiera otra fuente de luminosidad intensa, por ejemplo el sol. Además, eviten de dirigir el rayo láser hacia los ojos de un observador, también a través de superficies reflectantes como los espejos.

CAUTION

The LYNX™ D Hand-Held Reader is not user-serviceable. Opening the case of the unit can cause internal damage and will void the warranty.

WEEE COMPLIANCE

POWER SUPPLY

This device is intended to be supplied by a UL Listed or CSA Certified Power Unit marked "Class 2" or "LPS" output rated 10-30 V, minimum 0.75 A which supplies power directly to the scanner via the jack connector on the cable.

PATENTS

This product is covered by one or more of the following patents:

U.S. patents: 6,512,218 B1; 6,877,664 B1; 6,478,226 B2 and 6,442,180 B1.

Additional patents pending.

SERVICES AND SUPPORT

1 INTRODUCTION

1.1 LYNX™ D DESCRIPTION

The Lynx™ D Hand-Held Reader packs a lot of performance into an attractive, rugged, hand-held device. It operates in commercial and industrial environments as well as the front office.

Omni-directional Operating — To read a symbol or capture an image, you simply aim the reader and pull the trigger. Since Lynx™ D is a powerful omni-directional reader, the orientation of the symbol is not important.

Decoding — Thanks to powerful algorithms, Lynx™ D reliably decodes all major 1D (linear) barcodes, 2D stacked codes (such as PDF417), 2D matrix symbols (such as DataMatrix), postal codes (such as POSTNET, PLANET). The data stream — acquired from decoding a symbol — is rapidly sent to the host. The reader is immediately available to read another symbol.

Formatting and Concatenating — The string of a decoded code may be processed according to either a simple or advanced data formatting and be concatenated to other codes (up to 4 different codes).

Imaging — Lynx™ D can also function as a camera by capturing entire images or image portions of labels, signatures, and other items. Two different control modes are available for managing the camera exposure and calibration.

Autoscanning — An autoscan command causes the reader to scan continuously and to monitor the central zone of its reading area.

Flash Memory — Flash technology allows to upgrade the Lynx™ D reader as new symbologies are supported or as improved decoding algorithms become available.

1.2 PACKAGE CONTENTS

The following parts are included in the Lynx™ D package contents:

- Lynx™ D Hand-Held Reader
- CD-ROM containing the Lynx™ D Configuration Tools software and Lynx™ D Reference Manual
- Lynx™ D User's Manual

You may want to save your packing material in case you need to ship the reader at some later time.

1.3 CONFIGURATION METHODS

The Lynx™ D reader configuration can be performed in three ways:

- by reading the configuration codes with the Lynx™ D reader;
- by setting the configuration through the VisualSetup configuration program from the Host PC via the RS232 interface;
- by sending configuration strings from the Host PC via the RS232 interface (see Lynx™ D Reference Manual for details);

NOTE

This manual allows configuring the most common parameters through code symbols, while for complete configuration you can refer to the Lynx™ D Reference Manual available on the CD-ROM. See also the table in par. ***4.1*** *for a list of all configurable parameters.*

2 USING LYNX™ D

2.1 AIMING SYSTEM

The Lynx™ D reader uses an intelligent aiming system similar to those on cameras. By partially pulling the trigger, the aiming system indicates a field of view to be positioned over the code:

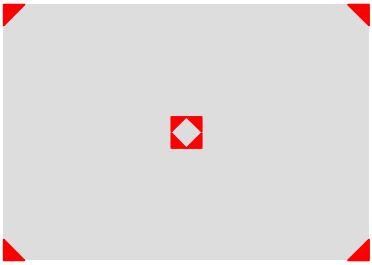

Figure 1 - Aiming System

When you pull the trigger completely a red beam illuminates the code. If the aiming system is centered and the entire symbology is within the aiming system, you will get a good read. The field of view changes size as you move the reader closer or farther away from the code.

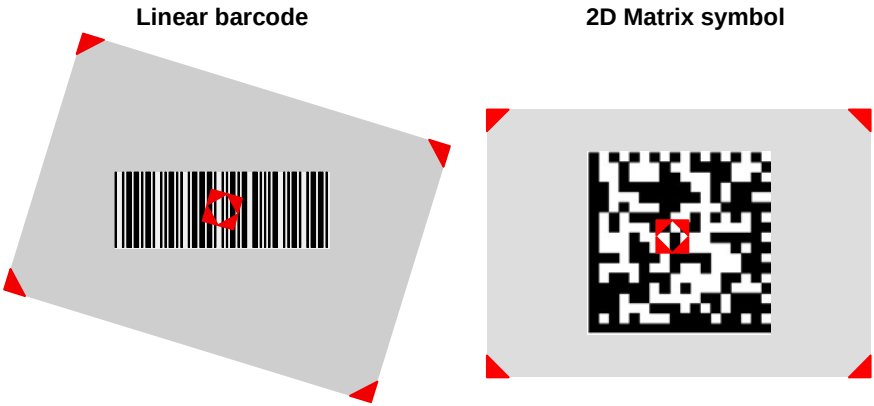

Figure 2 - Relative Size and Location of Aiming System Pattern

The field of view indicated by the aiming system will be smaller when the Lynx™ D is closer to the code and larger when it is farther from the code. Symbologies with smaller bars or elements (mil size) should be read closer to the unit. Symbologies with larger bars or elements (mil size) should be read farther from the unit. (See chapter 7 for further details).

NOTE

If reading codes positioned on reflective surfaces, it may be necessary to tilt the reader with respect to the barcode and/or set the Camera Control parameters. For configuring the Camera Control parameters refer to the Lynx™ D Reference Manual available on the CD-ROM.

2.2 INDICATORS

2.2.1 LED Indicators

The following LED indicators signal the reader functions:

LED	Behavior
Red	at power on, blinks briefly, then a beep occurs. Then, it turns off. lights when a wrong read occurs. lights when the aiming system is enabled. It turns off only when the trigger is released and the aiming system is disabled.
Green	lights when a symbol has been read and decoded.

2.2.2 Beeper

The Lynx™ D basic software provides beeper signals for good/wrong reading and for indicating errors. Its tone, volume and duration can be directly configured by using the codes given on page 45.

The application program can also manage the beeper (User Defined Beeper) when the reader is controlled by a Host PC. For details refer to the Lynx™ D Reference Manual.

3 INITIAL SETUP

This procedure allows setting up the reader to operate with the default settings:

Whenever you need to change the default values refer to chapter 4.

3.1 RS232 INTERFACE SELECTION

The Lynx™ D reader requires the RS232 interface cable and the AC/DC power adapter to be connected.

To install and configure your reader with the RS232 interface, follow these instructions:

1. Make all system connections as shown in Figure 3:

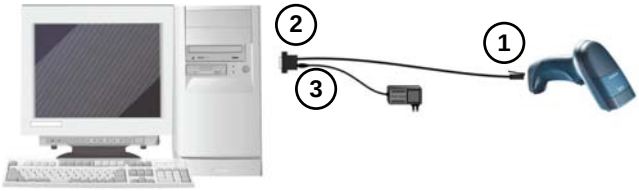

Figure 3 - RS232 Connection

2. Read the restore default parameter code below:

Restore Default

3. Read the RS232 interface selection code:

RS232

4. Power up your PC.

RS232 is the default interface set at the factory.

3.2 WEDGE INTERFACE SELECTION

The Lynx™ D reader requires the Wedge interface cable and the AC/DC power adapter to be connected.

To install and configure your reader with the Wedge interface, follow these instructions:

1. Make all the Lynx™ D reader connections as shown in Figure 4:

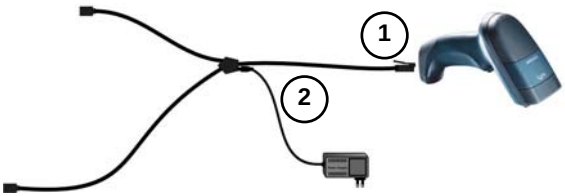

Figure 4 – Reader Wedge Connections

2. Read the restore default parameter code below:

Restore Default

3. Read the Wedge IBM AT interface selection code:

Wedge – IBM AT

4. Make all PC system connections as shown in Figure 5:

Figure 5 – PC Wedge Connection

5. Power up your PC.

CAUTION

When not using the Lynx™ D reader remember to disconnect the Wedge interface from the PC before disconnecting the power cord.

NOTE

While using the Lynx™ D it is always necessary to use cables adopting an external power supply.

3.3 USB INTERFACE SELECTION

The Lynx™ D reader requires the USB interface cable and the AC/DC power adapter to be connected.

The USB interface is compatible with:

Windows 98 (and later)	IBM POS for Windows
Mac OS 8.0 (and later)	4690 Operating System

To install and configure your reader with one of the USB interfaces, follow these instructions:

1. Make all the Lynx™ D reader connections as shown in Figure 6;

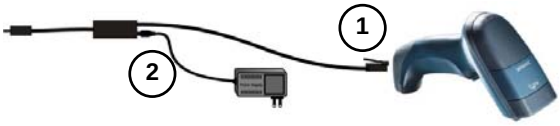

Figure 6 – Reader USB Connections

2. Read the restore default parameter code below:

Restore Default

3. Read the desired USB interface selection code:

USB-COM EMULATION

USB-KBD EMULATION

USB BULK

USB Generic HID

4. Connect the USB cable to PC as shown in Figure 7. The PC automatically recognizes the device and asks to install the device driver.

Figure 7 – PC USB connection

5. Install the USB driver on your PC (the first time only) to complete the connection.

- For USB Bulk the relevant files and drivers must be installed from the CD-ROM. See the “DLBulkUSB User Guide” file provided on the CD-ROM for more information.
- For USB COM the relevant files and drivers must be installed from the USB Device Installation software which can be downloaded from the web page http://www.scanning.datalogic.com.
- For USB Keyboard and for USB Generic HID the correct USB driver is included in the Host Operating System and will either be loaded automatically or will be suggested by the O.S. and should therefore be selected from the dialog box.

NOTE

The Lynx™ D reader is a USB self-powered device.

NOTE

If you need to change the USB device interface, after having reconfigured the reader, you have to disconnect and reconnect the cable to the PC.

4 CONFIGURATION USING CODE SYMBOLS

This section describes the programming method of using configuration code symbols to program your reader. By using the Lynx™ D reader to read/decode these special configuration symbols, you can configure, and obtain information from its system software.

NOTE

This manual allows configuring the most common parameters through code symbols. For complete configuration refer to the Lynx™ D Reference Manual. See also the default values table in par. 4.1 for a complete list of all configurable parameters.

When you are reading configuration code symbols, carefully aim the Lynx™ D 2D reader to avoid reading adjacent symbols.

The configuration code symbols in this chapter are divided into logical sections according to the type of configuration required, (RS232 configuration, Code selection, etc.). If arguments are required with a command, you can read additional code labels (typically digits) from Appendix B**.**

To configure your reader:

1. Read the **Enter Configuration** code ONCE, available on top of each page.
2. Modify the desired parameters in one or more sections by reading the parameter code and selecting the value from the Hex/Numeric table (see Appendix B) or by following the given procedures.
3. Read the **Exit and Save Configuration** code ONCE, available on top of each page.

Example for step 3:
To set the maximum length of characters in a Code 39 barcode symbol that the reader will decode to 32:

- first read the Maximum Length symbol for Code 39 on page 36
- then read the symbol for the digit "3" and lastly the symbol for the digit "2" in Appendix B.

4.1 DEFAULT SETTINGS

The following table lists the default values of all configurable parameters.
The parameters preceded by the (✓) symbol may be configured in this manual. For a complete configuration of all parameters refer to the Lynx™ D Reference Manual available on the CD-ROM.

Configuration Field		Default Setting
RS232 Communication		
✓	Baud Rate	115200
✓	Parity, Data Bits, Stop Bits	No parity; 8 Data bits; 1 Stop bit
✓	Handshake	None
✓	ACK/NACK Protocol	None
✓	FIFO	Enabled
✓	Intercharacter Delay	0
✓	Intercode Delay	0
✓	RX Timeout	10 seconds
USB COM Emulation		
✓	Handshake	None
✓	ACK/NACK Protocol	None
✓	FIFO	Enabled
✓	Intercharacter Delay	0
✓	Intercode Delay	0
✓	RX Timeout	10 seconds

KEYBOARD SETTING

The values set by this procedure are not effected by the Restore Default code but will be lost if the Interface Selection code is read.

Set Alphanumeric Keys

The reader can be used with terminals or PCs with various keyboard types and nationalities through a simple keyboard setting procedure.

Keyboard setting consists of communicating to the reader how to send data corresponding to the keyboard used in the application. The keys must be set in a specific order.

Press and release a key to set it.

Some characters may require more than one key pressed simultaneously during normal use (refer to the manual of your PC or terminal for keyboard use). The exact sequence must be indicated to the reader in this case pressing and releasing the different keys.

Example:
If one has to press the "Shift" and "4" keys simultaneously on the keyboard to transmit the character "$" to the video, to set the "$", press and release "Shift" then press and release "4".

Each pressed and released key must generate an acoustic signal on the reader, otherwise repress the key. Never press more than one key at the same time, even if this corresponds to the normal use of your keyboard.

Press "Backspace" to correct a wrong key entry. In this case the reader emits a wrong beep.

Note: "CAPS LOCK" and "NUM LOCK" must be off before starting the keyboard setting procedure. "SHIFT" must be repressed for each character and cannot be substituted by "CAPS LOCK".

1. Read the "Set Alphanumeric Keys" code.
2. Press the keys shown in the following table according to their numerical order:

Some ASCII characters may be missing as this depends on the type of keyboard: these are generally particular characters relative to the various national symbologies. In this case:

- **The first 4 characters (Shift, Alt, Ctrl, and Backspace) can only be substituted with keys not used, or substituted with each other.**
- Characters can be substituted with other single symbols (e.g. "SPACE") even if not included in the barcode set used.
- Characters can be substituted with others corresponding to your keyboard.

The reader signals the end of the procedure with 3 beeps indicating the keys have been registered.

01 : **Shift**		
02 : **Alt**		
03 : **Ctrl**		
04 : **Backspace**		
05 : **SPACE**	28 : **7**	51 : **N**

Acoustic Signals

Four types of acoustic signals are associated with the following steps:

1. Enter keyboard setup
2. Exit keyboard setup
3. SHIFT, ALT, CTRL, BACKSPACE keys
4. Keyboard keys (SHIFT, ALT, CTRL, BACKSPACE excluded)

These signals facilitate the selection of those characters requiring more than one key pressed simultaneously.

Example

The transmission of the "%" character implies two different steps:

1. Press the SHIFT key
2. Press the "5" key

The different tones produced by the reader indicate that both steps have been successful and that the character has been transmitted.

EXTENDED HEADER/TERMINATOR KEYS

For the WEDGE interface, the following extended keyboard values can also be configured:

These values are restored through the Interface Selection code and not Restore Default.

EXTENDED KEYBOARD TO HEX CONVERSION	
	IBM AT
HEX	KEY
83	ENTER
84	TAB
85	F1

96	↓
97	←
98	→
99	ESC
9A	CTRL (Right)
9B	Euro

SET CUSTOM EXTENDED HEADER/TERMINATOR KEYS

Set Extended Keys

The extended Header/Terminator keys for **Wedge Interface users** can be customized by defining them through a simple keyboard setting procedure.

For example, the Numeric Keypad keys can be set for use as Headers or Terminators by substituting the default extended keys during this procedure.

Press and release a key to set it.

Some characters may require more than one key pressed simultaneously during normal use (refer to the manual of your PC or terminal for keyboard use). The exact sequence must be indicated to the reader in this case pressing and releasing the different keys.

Example:
If one has to press the "Shift" and "4" keys simultaneously on the keyboard to transmit the character "$" to the video, to set the "$", press and release "Shift" then press and release "4".

Each pressed and released key must generate an acoustic signal on the reader, otherwise repress the key. Never press more than one key at the same time, even if this corresponds to the normal use of your keyboard.

Press "Backspace" to correct a wrong key entry. In this case the reader emits a wrong beep.

Note: "CAPS LOCK" and "NUM LOCK" must be off before starting the keyboard setting procedure. "SHIFT" must be repressed for each character and cannot be substituted by "CAPS LOCK".

1. Read the "Set Extended Keys" code.
2. Press the first 4 keys indicated in the following table.
3. Define all keys from 5 to 28 in the following table.

If the first 4 KEYS (Shift, Alt, Ctrl, and Backspace) are not available on your keyboard, you can only substitute them with keys not used, or substitute them with each other.

The reader signals the end of the procedure with 3 beeps indicating the keys have been registered.

CUSTOM EXTENDED KEYBOARD SETTING TABLE

Acoustic Signals

Four types of acoustic signals are associated with the following steps:

1. Enter keyboard setup
2. Exit keyboard setup
3. SHIFT, ALT, CTRL, BACKSPACE keys
4. Keyboard keys (SHIFT, ALT, CTRL, BACKSPACE excluded)

These signals facilitate the selection of those characters requiring more than one key pressed simultaneously.

Example

The transmission of the "%" character implies two different steps:

1. Press the SHIFT key
2. Press the "5" key

The different tones produced by the reader indicate that both steps have been successful and that the character has been transmitted.

4.5 DATA FORMAT

The “Data Format Default” code restores all the Data Format configuration parameters to their default values, with the exception of the Symbology Independent Header and Terminator selections.
The Symbology Independent Header and Terminator parameters are set to their default values when reading the interface selection code.

6 MAINTENANCE

You do not need to perform regular preventative maintenance on the Lynx™ D reader.

Do not try to open the case, because you might damage the interior electronic components and such action voids the warranty.

You can keep your reader in good operating condition by:

- periodically cleaning the reading window using water or a mild detergent solution and a soft cloth or tissue.
- watching for any damage to the housing.

CAUTION

Do not use abrasive cleaning agents on the reader's window to avoid scratches. Do not use solvents on the housing or window to avoid damage. Do not submerge the reader in water. It is not waterproof.

7 TECHNICAL FEATURES

LYNX™ D432 / D432E Common Features

Electrical Features	
Operating Voltage	10 to 30 V
Power Consumption @ 12V (Stand-by) @ 12V (Typical) @ 10V (Peak current)	 110 mA 245 mA 305 mA
Communications Features	
Standard Interfaces Proprietary Interfaces	RS232, Keyboard emulation AT IBM, , USB COM emulation, USB Keyboard emulation USB Bulk, USB Generic HID
Environmental Features	
Operating Temperature	0° to+ 55 °C (+32° to +131 °F)
