

## QUICKSCAN™ L QD2300 SERIES OBSOLESCENCE NOTICE

### OVERVIEW

With the availability of the **QuickScan I QD2131** series and given the superior performance vs. laser devices, Datalogic is announcing the **obsolescence** of the **QuickScan L QD2300** product line, effective **March 31, 2019**.

### PRODUCT REPLACEMENT RECOMMENDATION

The **QuickScan I QD2131** series is the natural replacement for the QuickScan L QD2300 product line. It provides equivalent models for all part numbers and is also compatible with the existing accessories and cables.

The QuickScan QD2131 imager features an extra-wide field of view and an extra-long scan line which allows users to read longer bar codes from a closer distance. Additionally, the QD2131 imager has an extended reading range which exceeds the requirements of most general purpose scanning applications. The highly visible scan line makes the imager more user-friendly. The enhanced decoding algorithm enables the QD2131 imager to capture and decode bar codes more quickly. Elegant design details are incorporated into a smaller, lightweight enclosure without sacrificing durability. The QD2131 imager also supports Remote Management functions using the Host Download application. Ideally suited for applications at the point-of-sale (POS), the QuickScan QD2131 imager can also read loyalty cards and codes from a mobile phone screen, which a laser scanner is not capable of doing. This is very useful to meet the needs of mobile marketing applications.
