

Magellan 1500i Verifone Ruby configuration sheet

Description

This article provides programming barcodes to configure the Magellan 1500i and 900i to work with most Verifone POS registers

Note that this requires cable 8-0751-16 to work properly.

Resolution Steps

Scan each barcode step in numbered order. Note that step 3 is a choice.

1.

Enter Programming Mode

2.

3. For this step choose according to your setting on the register (if you don't know, try each one until one works)

Choose this one if your register is set to "2D Scanner"

Or...

Magellan 1500i Verifone Ruby configuration sheet

Choose this one if your register is set to "Ruby Ready"

Scanner will reboot after scanning one of the programming codes in step 3

4. Test a product by scanning it with the scanner to see if the product rings up on the register. If the Verifone makes a rejection double beep, try the others setting in step 3 after starting with steps 1 and 2.
